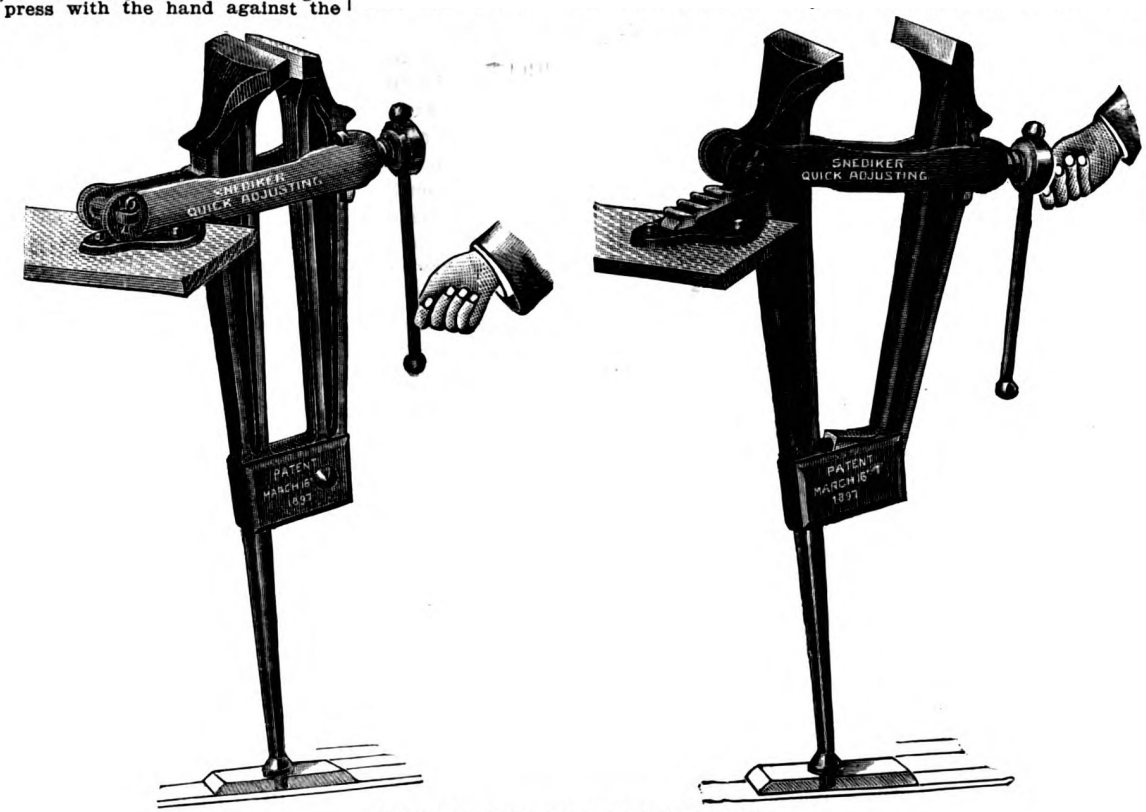
SNEDIKER'S BLACKSMITH'S LEG VISE.

A new advertisement, printed in "The Blacksmith and Wheelwright" this month, describes and illustrates Snediker's Patent Blacksmith's Leg Vise. Heretofore, the leg vise known to the trade has been regarded as the crudest and oldest form of vise, but in Snediker's vise we have a quick-acting leg vise, giving practically all the advantages of quick-acting bench vises. This is the strongest leg vise on the market, and its instantaneous adjustment is a great advantage. By its construction unnecessary weight is avoided, without impairment of strength. To close, press with the hand against the screw, with a slight lift to throw strap pawl into engagement with the rack, as shown in cut, then raise handle to tighten. To open the vise loosen the screw and press easily against the lower end of the handle, as shown. This lifts the strap pawl out of the rack, when the front jaw drops forward and open. These vises are so simple that they cannot get out of order; yet their cost is low. If your dealer does not carry Snediker's Vise in stock, write for catalogue and prices direct to the selling agents, Tower & Lyon, 95 Chambers street, New York. Mention "The Blacksmith and Wheelwright" when you write.



Snediker's Patent Blacksmith's Leg Vise.

Closed. Open.

SNEDIKER'S

Quick Adjusting Blacksmith's Leg Vise

Quick Adjusting—This Vise can be opened or closed instantly, and one turn of handle will grip or loosen work.

Simplicity—The construction is simple. Working parts exposed to view and there are no complications.

Strength—Riehl Bros. U. S. testing machine has proven this Vise to be of greater strength than any other Leg Vise in the market.

Note—Long bolts, etc., can be placed in centre of jaws, thereby giving a firm grip.
